

Validation of Space Weather Models at Community Coordinated Modeling Center.

M. M. Kuznetsova, A. Pulkkinen, L. Rastaetter, M. Hesse, A. Chulaki, M. Maddox

The Community Coordinated Modeling Center (CCMC) is a multi-agency partnership, which aims at the creation of next generation space weather modes. CCMC goal is to support the research and developmental work necessary to substantially increase space weather modeling capabilities and to facilitate advanced models deployment in forecasting operations. The CCMC conducts unbiased model testing and validation and evaluates model readiness for operational environment. The presentation will demonstrate the recent progress in CCMC metrics and validation activities.
